

ABSTRACT OF THE DISCLOSURE

A method and system for the online purchase of electronic information wherein electronic information is selected by an end user from an electronic database. The selected information may then be sampled by audio and/or visual means. The end user then pays for the selected electronic information. The electronic information is then received by a user printing device, which prints the electronic information on a medium such as a CD or DVD. A label is then selected by the end user and printed on the medium
